

SimpleSignSM

The electronic document signing and collaboration solution

SimpleSignSM Highlights

Adobe Systems and Identrus have partnered to create a solution to digitally sign Adobe PDF files.

Document workflows can be completely automated, eliminating expensive and time-consuming paper-based processes.

Signer's identity and document authenticity are "certified" in real time.

Enhanced security features protect privacy and document integrity with built-in tamper controls and encryption options.

SimpleSign Pilot Opportunities

Several banks are already piloting SimpleSign.

Contact us to find out how you can pilot SimpleSign in your organization.

Signing Made Simple

Identrus is pleased to announce the availability of SimpleSign – a single, packaged solution that allows banks, governments and corporations to migrate their paper-based processes online quickly and easily.

Identrus has partnered with Adobe Systems, creators of the Adobe PDF document format, to create an "out of the box" solution that enables financial institutions of all sizes to use their Identrus credentials to create legally binding electronic documents using digital signatures and Adobe PDF files.

Automate Document Workflows

Most organizations today have migrated some of their forms and documentation to electronic formats and made them available online. Most e-forms however are "dumb" – or limited in their use – as customers either need to remain online to fill out a web-based form, or download a copy to print locally, sign the form and return via fax or post.

SimpleSign allows you to automate the entire process, eliminating paper processing completely. With SimpleSign, organizations can create "smart" forms that have all of the benefits of Web-based forms (such as validations, calculations and other business logic to ensure only the right data is captured – and in the right format) but retain the look, feel and ease-of-use of paper. The digital signature appears *inside* the PDF similar to a traditional "wet" signature. Through the use of PDF, customers can download forms, fill them out online or at-will, digitally sign them, and return the documents with a single-click.

Create Certified Documents

SimpleSign allows the original author to "certify" a document with an Identrus digital signature. These "certified" documents then bear the author's digital signature with a seal, visible in any part of the PDF document. Anyone who opens a certified PDF can immediately see the verification of the author's identity and know that the document is authentic.

Manage and Track Changes

Tamper control is also an important part of the SimpleSign solution. During the document signing process, authors can designate what changes, if any, can be applied to the document. These permissions are controlled based on an Identrus Identity credential.

For example, bank customers can fill in personal information and select from various options on a loan form, but only bank employees can modify rates and terms based on bank policy.

Validate Signatures in Real-Time

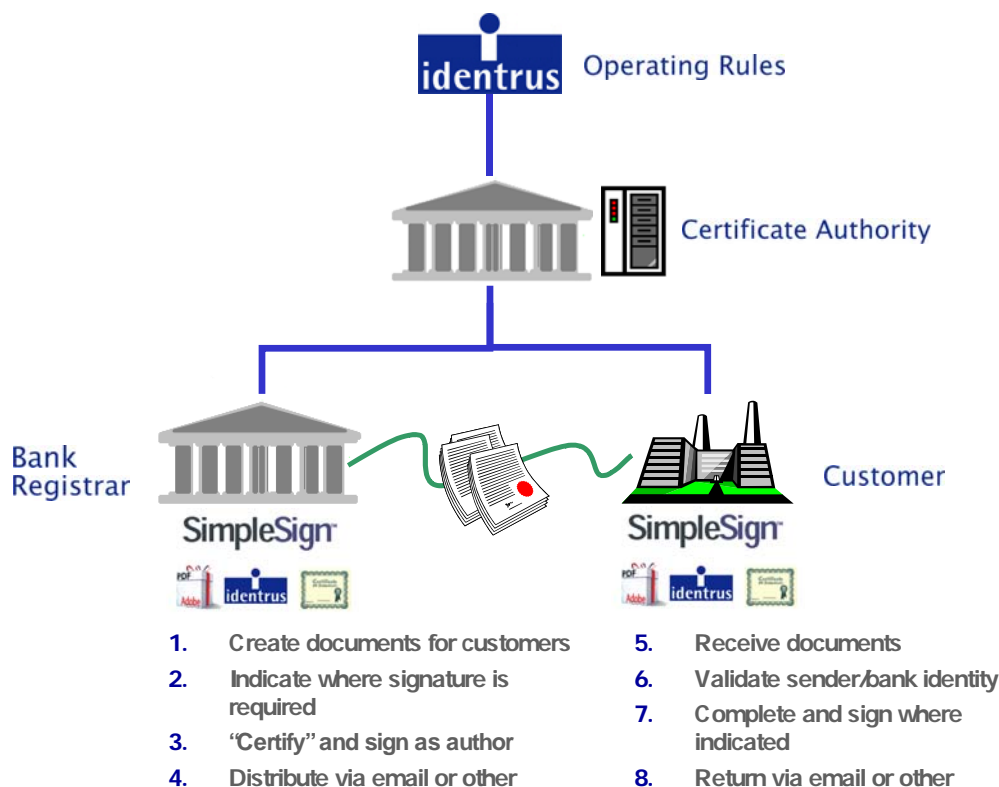

As with any Identrus-compliant solution, real-time validation of Identity is a core feature. Individual identities are validated automatically when documents are opened, and can also be done on-demand with a simple click. Status of the individual's certificate is prominently displayed with the signature.

Protect Private Information

SimpleSign protects the confidentiality of sensitive information. Documents can be encrypted for one or more recipients simply by choosing the "encrypt for Identities" feature within Acrobat. The process for keeping information secure could not be simpler.

SimpleSign Process Flow

- SimpleSign is easy to install and easy to use.
- It works natively with Adobe PDF.
- Signatures appear inside the document.
- Use for contracts, forms and more.

Pilot Program Opportunities

Identrus is conducting a SimpleSign pilot program in conjunction with Adobe, the American Bankers Association and Wells Fargo for financial institutions within the United States. Identrus is currently creating a separate pilot program for any existing Identrus Participants outside of the US.
